

*The miracles of science®*

DuPont Chemical Solutions Enterprise

Sept. 7, 2007

Notice Regarding: Use of DuPont™ **VIRKON® AQUATIC** in aquatic applications.

As seafood production and ornamental fish have become more integrated into our everyday lives, DuPont Animal Health Solutions recognized a need for a disinfectant specifically formulated to help prevent the spread of disease in the aquaculture industry.

The result is DuPont™ **VIRKON® AQUATIC**.

**VIRKON® AQUATIC** has a formulation based on the same active ingredient as DuPont™ Virkon® S, but inert ingredients which are designed for use in aquatic applications. DuPont Animal Health Solutions fully recommends DuPont's **VIRKON® AQUATIC** for the disinfection of hard surfaces, equipment, and vehicles associated with aquaculture. It is also recommended for use in foot baths at aquaculture facilities.

The label for **VIRKON® AQUATIC** contains expanded aquaculture claims and applications and is EPA approved for use in aquaculture. Virkon® S will no longer be recommended for use in aquaculture and its label will no longer carry EPA approval for aquaculture claims.

We are pleased to offer **VIRKON® AQUATIC**, and believe it will become an important tool for use in the aquaculture industry.

Respectfully,

DuPont Animal Health Solutions
